

## Daimler Ferret Scout Car Armament

Last updated on the 06/05/2016 17:09

The Ferret Scout Cars weapon system is a defence system not offensive (get in get out without being seen).

All the deactivated weapons in the pictures below have been deactivated to currant UK / US / European legislation.

GPMG (Jimpie) 7.62mm Turret mounted weapon

Browning .303 Turret mounted weapon

Awaiting picture

Sterling SMG (Sub Machine Gun).

By all accounts the Ministry of Defence has not released any 'British' SMG's for deactivation (war reserve) and all the deactivated weapons currently in circulation come from other suppliers / countries. Whether this is true....

Flare Pistol.

Bren Gun.

Picture courtesy of Bob Hill

Self Loading Rifle (SLR)

Also issued to some troops with Ferrets

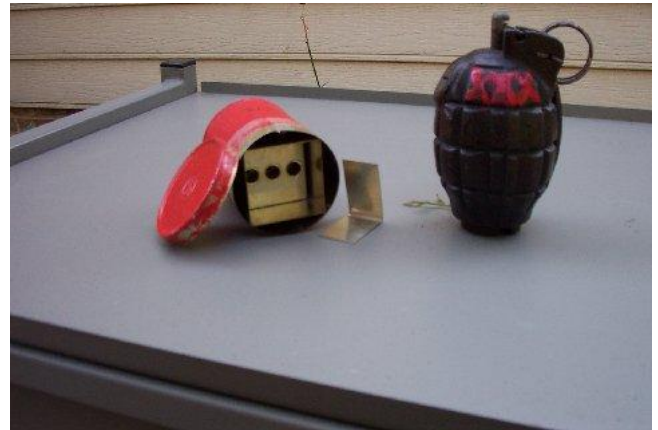

As I once owned the SLR below the pictures show some of the items that I owned with the rifle. Cleaning kit, Bayonet, Blank Firing Adaptor (BFA), Sight Protector, Butt Pouch and Sight Pouch.

No.36 Mills Grenade and Fuse box.

Pictures courtesy of John Sellers, James McNeely and Bob Hill
